INT. J. CONTROL, 2000, VOL. 73, NO. 18, 1703–1710

SUBJECT INDEX (Vol. 73)

2D
  feedback systems stability conditions, 343
  MIMO discrete linear systems, state-space realization, elementary operation and variable inversion approach, 242

Absolute stability criteria, robust, as basis for non-linear QFT design stability, 74
Actuator system, antagonistic biomimetic type, control, 804
Acyclic system matrix of fourth-order linear time-invariant system with one uncertain parameter, robust stability, 1346
Adaptive
  control of class of non-linearly parametrized systems using convexification, 1312
  iterative learning controller, error convergence, 851
  Lyapunov technique for non-linear iterative learning, 840
  output feedback control of synchronous motors, 1475
Air contamination events in 3D environments, fault diagnosis, 1592
Algorithm
  adaptive learning type, in dynamical-filter-weights neurons, sliding-mode control strategy, 678
  for generalized iterative learning controller against initial state error, 871
  for polynomial matrix factor extraction, 686
Analysis and design, gain-scheduling approach, survey, 1001
Analytical stable continuous-time generalized predictive control design for minimum-phase systems, 1605
Anti-windup controller design using linear parameter-varying control methods, 1104

Bias-eliminated least-squares method for continuous-time model identification of closed-loop systems, 38
Biomimetic antagonistic actuator system control, 804
Bounded-real-lemma extensions of discrete-time systems, 1322

Causality, closability and graphs of linear time-invariant discrete-time systems, 1051
Chemical reactors, two in cascade, illustration of flatness-based control by quasi-static feedback, 115
Closability, graphs and causality of linear time-invariant discrete-time systems, 1051
Closed-loop
  stability of a feedback digital control system, finite word length issues in an ℓ_1 framework, 166
  systems, continuous-time model identification, bias-eliminated least-squares method, 38
Coinvariant subspaces, Lyapunov equation, problems related to spectral factorizations, 1129
Compensation, dynamic, fixed-order, for linear systems with actuator amplitude and rate saturation constraints, 1087
Conservative systems, infinite-dimensional, conservativity condition for the Saint-Venant equations, 1224
Constrained-to-finite-length-sequence manipulated variable control problem, 152
Contamination events (of air) in 3D environments, fault diagnosis, 1592
Continuous-time analytical stable generalized predictive control design for minimum-phase systems, 1605
Control
  adaptive output feedback type, for synchronous motors, 1475
  adaptive, of class of non-linearly parametrized systems using convexification, 1312
  constrained feedback types, of imperfectly known singularly perturbed non-linear systems, 49
  continuous-time linear predictive type, and flatness, a module-theoretic setting with examples, 606
  deadbeat-tracking type, simultaneous, of threee plants, multivariable case, 361
  dissipative, of linear discrete-time systems with dissipative uncertainty, 317
  dual, worst-case, basic results, 1621
  flatness-based, by quasi-static feedback, illustrated on a cascade of two chemical reactors, 115
  global, $\mathcal{H}_\infty$-type, and almost disturbance decoupling for a class of interconnected non-linear systems, 382
  guaranteed cost problem, for uncertain dissipative models, Riccati equation approach, 762
  H_∞ type, for linear systems with additive controller gain variations, 1500
  H_2-type, robust, for discrete-time Markovian jump linear systems, 11
  iterative learning and repetitive, for engineering practice, 930
  iterative learning sampled-data type, using fuzzy network design, 902
  iterative learning type, D-type and P-type designs, and anticipatory approach, 890
  linear quadratic optimal learning type, 832
  model reference robust type, of SISO systems with unmatched disturbances, 666
  non-linear feedback type, of parabolic partial differential difference equation systems, 1572
  non-linear position–force type, of objects grasped by multifingered mechanical hands, 639
  non-linear tracking type, for multivariable constrained input linear systems, 1160
  of antagonistic biomimetic actuator system, 804
  of cost, guaranteed, of uncertaindiscrete systems with delays, 105
  of cost, minimax, guaranteed, of uncertain non-linear systems, 1491
  of dynamic systems with unknown operating point, 600
  of non-linear parabolic PDE systems, and finite-dimensional approximation, 439
  of robotic manipulator, non-redundant rigid type, compliant motion control, 225
  of solidification temperature field, piecewise constant control method, 545
  of synchronous motor, experimental comparison of linear robust control with non-linear control, 624
  of variable speed wind turbines, design task, 1189
  of variable speed wind turbines, dynamic models, 1173

optimal, non-linear, robust, for non-linear uncertain systems, 329
optimal, of distributed hyperbolic systems with deviating arguments, 1026
optimal, of dynamic systems with hysteresis, 22
optimal, robust control design approach, 177
output-feedback predictivetype, of constrained linear systems via set-membership state estimation, 655
predictive, non-linear model based, successive constrained optimization and interpolation, 312
problem, $\mathcal{H}_\infty$-type, extended, solvability condition using Riccati inequalities, 265
problem, minimum finite length type, 152
problems class, H_∞-type, non-linear, non-standard, new solutions, 276
repetitive, of tracking systems with time-varying periodic references, 1
risk-averse, of three-dimensional wear process, 1307
robust H_∞ suboptimal and guaranteed cost state feedbacks as solutions to linear-quadratic dynamic games under uncertainty, 219
robust learning type, for robotic manipulators, extension to class of non-linear systems, 858
robust, d.c. optimization approach, feasibility problems, 89
robust, design of non-linear processes using empirical state affine models, 1525
sampled-data H_∞ state-feedback type, of systems with state delays, 1115
sampled-data non-linear H_∞-type, 704
self-tuning type, by model unfalsification, part 1, 1548
self-tuning type, by model unfalsification, part 2, 1560
sliding mode type, synthesized, of single-link flexible robot, 197
sliding mode type, with uncertainty adaptation for uncertain input-delay systems, 1255
Control systems
digital, feedback type, finite word length stability issues in an ℓ_1 framework, 166
Hamiltonian, with dissipation, H_∞ control, passivity-based stabilization, applications to power systems, 1686
non-holonomic, Lyapunov design of global state and output feedback trackers, 744
non-linear, approximate model matching, 1671
state space type, design based on non-minimal state-variable feedback, further generalization and unification results, 1329
with uncertainties, non-linear, feedback linearizable, exponential tracking, 1507
Controllability
of linear stochastic systems, 144
of symmetric control systems, quantitative analysis, 254
Controller
adaptive iterative learning type, error convergence, 851
anti-windup type, design using linear parameter-varying control methods, 1104
fixed-structure type, design for systems with actuator amplitude and rate non-linearities, 520
gain variations, additive, in linear systems, H_∞ control, 1500
generalized iterative learning type, against initial state error, 871
iterative learning type, with reduced sampling rate for plants with variations in initial states, 882
model-free, for single-link flexible smart materials robot design, 531
of position, real-time iterative learning type, practical implementation, 992
output feedback type, stabilization of systems with non-linear actuators, 187
Controllers
commutative, effective and reliable, design using normalizing precompensator, 1280
decentralized, dynamic output feedback type, design via separation procedure, 371
dynamic, resilient, robust, for systems with parametric uncertainty and controller gain variations, 1405
induced-norm type, fixed-structure synthesis, 1437
iterative and repetitive learning type, for linear multivariable internal-model-based design, 914
ℓ_2-gain type, for linear parameter-varying discrete time-delay systems, 481
LQ type, robust, non-fragile, static state feedback case, 159
LQ/LQI type, sequential tuning methods, for multivariable systems, application to hot strip mills, 1392
LQR type, with worst case rejection, 1516
optimal decoupling one-degree-of-freedom type, Wiener–Hopf design, 1657
robust multivariable iterative learning type, synthesis, with application to wafer stage motion system, 968
Convergence and existence of solutions to the H_∞ sampled-data estimation problem, 1382
Convexification of non-linearly parametrized systems class, for adaptive control, 1312
Copolymerization reaction, free radical type, application of observer-based fault diagnosis for class of non-linear systems, 787
Cost control
guaranteed, of uncertain discrete systems with delays, 105
minimax, guaranteed, of uncertain non-linear systems, 1491
quadratic, guaranteed, for uncertain dissipative models, Riccati equation approach, 762

D.C. optimization approach to robust control, feasibility problems, 89
Deadbeat-tracking control of three plants, simultaneous, multivariable case, 361
Decentralized stabilization of large scale systems with multiple delays in the interconnections, 1213
Decoupling in linear multivariate systems, algebraic approach, 582
Delayed uncertain discrete systems, guaranteed cost control, 105
Descriptor systems with uncertainties in the derivative matrix, robust stabilization via state feedback, 407
Design
analytical stable continuous-time generalized predictive control, for minimum-phase systems, 1605
and analysis, gain-scheduling approach, survey, 1001
dynamic output feedback sliding mode type, for class of linear unmatched uncertain systems, 1463
fuzzy network type, for sampled-data iterative learning control, 902
internal-model-based, of repetitive and iterative learning controllers for linear multivariable systems, 914
Lyapunov type, of global state and output feedback trackers for non-holonomic control systems, 744
observer type, for uniformly observable non-linear systems, 1375
of anti-windup controller, using linear parameter-varying control methods, 1104
of dynamic output feedback decentralized controllers via a separation procedure, 371

of effective and reliable commutative controllers, using normalizing precompensator, 1280
of fixed-structure controller for systems with actuator amplitude and rate non-linearities, 520
of LQR controllers with worst case rejection, 1516
of robust control, optimal control approach, 177
of state space control system, based on non-minimal state-variable feedback, further generalization and unification results, 1329
robust control of non-linear processes using empirical state affine models, 1525
structure-type and control-type integration, to achieve mixed H_2/H_∞ performance, 1449
task for variable speed wind turbine control, 1189
Wiener–Hopf type, of optimal decoupling one-degree-of-freedom controllers, 1657
Designing dynamic consistency relations for fault detection and isolation, 720
Designs
iterative learning control, D-type and P-type, and anticipatory approach, 890
QFT-type, non-linear, based on robust absolute stability criteria, stability, 74
Differential (partial) difference equation systems, parabolic, non-linear feedback control, 1572
Digital control system, feedback type, finite word length stability issues in an ℓ_1 framework, 166
Discrete
non-linear uncertain system class, stability and stabilization, general approach, 1298
uncertain systems with delays, guaranteed cost control, 105
Discrete-event systems, timed, new approach to synthesis problems, 505
Discrete-time
linear systems with dissipative uncertainty, dissipative control, 317
linear time-invariant systems, graphs, closability and causality, 1051
Markovian jump linear systems, robust H_2-control, 11
non-linear systems, non-standard iterative learning control approach to tracking periodic signals, 955
systems, bounded-real-lemma extensions, 1322
systems, perturbed, with error variance and circular pole constraints, robust state estimation, 303
systems, positive, with differential constraints, absolute stability, 210
Dissipative
control of linear discrete-time systems with dissipative uncertainty, 317
uncertain models, quadratic guaranteed cost control, Riccati equation approach, 762
Distributed
hyperbolic systems with deviating arguments, optimal control, 1026
processes, optimal sensor location for parameter estimation, 1235
Disturbance decoupling for systems with direct feedthrough matrices, matrix pencil characterizations, 1042
Dual control, worst-case, basic results, 1621
Dynamic
compensation, fixed-order, for linear systems with actuator amplitude and rate saturation constraints, 1087
controllers, resilient, robust, for systems with parametric uncertainty and controller gain variations, 1405
models for control of variable speed wind turbines, 1173
output feedback sliding mode design for class of linear unmatched uncertain systems, 1463
systems with hysteresis, optimal control, 22
Dynamical hybrid systems class stability, 1362

Engineering practical iterative learning and repetitive control, 930
Equivalence relations between learnability, output-dissipativity and strict positive realness, 824
Error
convergence in an adaptive iterative learning controller, 851
in initial state, generalized iterative learning controller, 871
Estimation
of state, robust, for perturbed systems with error variance and circular pole constraints, discrete-time case, 303
problem, H_∞ sampled-data type, convergence and existence of solutions, 1382
sampled-data non-linear H_∞-type, 704
Existence and convergence of solutions to the H_∞ sampled-data estimation problem, 1382
Exponential tracking of feedback linearizable non-linear control systems with uncertainties, 1507

Fault detection
and isolation, designing dynamic consistency relations, 720
in dynamic bounded stochastic distributions, observer based FDI techniques, 1424
moving horizon estimation based, applied to cold tandem steel mill, 427
Fault diagnosis
for air contamination events in three-dimensional environments, 1592
observer-based, for class of non-linear systems, application to free radical copolymerization reaction, 787
FDI techniques, observer based, applied to fault detection in dynamic bounded stochastic distributions, 1424
Feasibility problems in the d.c. optimization approach to robust control, 89
Feedback
cascade relay type, for frequency response identification, 1647
control, constrained, of imperfectly known singularly perturbed non-linear systems, 49
control, quasi-static, flatness-based, illustrated on a cascade of two chemical reactors, 115
digital control system, finite word length stability issues in an ℓ_1 framework, 166
linearizable non-linear control systems with uncertainties, exponential tracking, 1507
loop stabilizability conditions, transfer function slope, 1249
non-linear, control of parabolic partial differential difference equation systems, 1572
of output, local stabilization of non-linear systems, 292
of output, sliding mode design, dynamic, for class of linear unmatched uncertain systems, 1463
of output, stabilization of systems with non-linear actuators, 187
of state, static, robust non-fragile LQ controllers, 159
output type, adaptive control of synchronous motors, 1475
systems, 2D, stability conditions, 343
Frequency response identification with cascade relay feedback, 1647
Fuzzy network design of sampled-data iterative learning control, 902

Gain variations
additive, of controller, in H_∞ control of linear systems, 1500
in robust resilient dynamic controllers for systems with parametric uncertainty, 1405
Gain-scheduling analysis and design, survey, 1001
Games, LQ dynamic type, under uncertainty, robust H_∞ suboptimal and guaranteed cost state feedbacks as solutions, 219
Geometric solution to the simultaneous bounded domain stabilization problem, 1536
Graphs, closability and causality of linear time-invariant discrete-time systems, 1051

H_2/H_∞ performance, mixed, achieved by integrating structure and control design, 1449
H_2-control, robust, for discrete-time Markovian jump linear systems, 11
H_∞
control for linear systems with additive controller gain variations, 1500
control of Hamiltonian control systems with dissipation, passivity-based stabilization, applications to power systems, 1686
control problems class, non-linear, non-standard, new solutions, 276
multistep ahead prediction problem, existence and convergence of solutions, 1078
sampled-data estimation problem, convergence and existence of solutions, 1382
state-feedback control, sampled-data type, of systems with state delays, 1115
$\mathcal{H}_\infty$ control problem, extended, solvability condition using Riccati inequalities, 265
Hammerstein models identification for control using asymptotic method, 1692
Hands, mechanical, multifingered, non-linear position–force control of object grasping, 639
Hybrid
dynamical systems class stability, 1362
quasi-periodic dynamic systems, uncertain, stability, 63
Hyperbolic distributed systems with deviating arguments, optimal control, 1026
Hysteretic dynamic systems, optimal control, 22

Identification
of continuous-time model of closed-loop systems, bias-eliminated least-squares method, 38
of frequency response with cascade relay feedback, 1647
of Hammerstein models for control using asymptotic method, 1692
of non-linear systems, multi-directional model validity tests, 132
Infinite-dimensional conservative systems, conservativity condition for the Saint-Venant equations, 1224
Input-delay systems, uncertain, sliding-mode control with uncertainty adaptation, 1255
Interconnected non-linear systems class, global $\mathcal{H}_\infty$ control and almost disturbance decoupling, 382
Interconnection delays, multiple, of large scale systems, decentralized stabilization, 1213
Iterative learning control
and repetitive control for engineering practice, 930
designs, D-type and P-type, and anticipatory approach, 890
non-standard approach to tracking periodic signals in discrete-time non-linear systems, 955
sampled-data type, using fuzzy network design, 902
Iterative learning controller
adaptive, error convergence, 851
generalized, against initial state error, 871
multivariable, robust, synthesis, application to wafer stage motion system, 968
position, real-time, practical implementation, 992
type, for linear multivariable systems, internal-model-based design, 914
with reduced sampling rate for plants with variations of initial states, 882
Iterative learning, non-linear, by an adaptive Lyapunov technique, 840

Learnability, equivalence relations with output-dissipativity and strict positive realness, 824
Learning
non-linear, iterative, by an adaptive Lyapunov technique, 840
optimal trajectories for non-holonomic systems, 980
sliding-mode-based adaptive type, in dynamical-filter-weights neurons, 678
Learning control
iterative and repetitive, for engineering practice, 930
iterative, D-type and P-typedesigns, and anticipatory approach, 890
iterative, non-standard approach to tracking periodic signals in discrete-time non-linear systems, 955
iterative, sampled-data type, using fuzzy network design, 902
linear, quadratic, optimal, 832
robust, for robotic manipulators, extension to class of non-linear systems, 858
Learning controller
iterative and repetitive type, for linear multivariable systems, internal-model-based design, 914
iterative, generalized, against initial state error, 871
iterative, multivariable, robust, synthesis, with application to wafer stage motion system, 968
iterative, real-time, of position, practical implementation, 992
iterative, with reduced sampling rate for plants with variations of initial states, 882
Linear
discrete-time systems with dissipative uncertainty, dissipative control, 317
multivariable systems, algebraic approach to decoupling, 582
quadratic optimal learning control, 832
quadratic performance controllers with worst case disturbance rejection, 1516
robust control of a synchronous motor, experimental comparison with non-linear control, 624
stochastic systems, controllability, 144
time-invariant discrete-time systems, graphs, closability and causality, 1051
Linear systems
constrained, output-feedback predictive control via set-membership state estimation, 655
marginal and/or unstable, constrained exponential stabilizability, 652
subject to discrete-time Markovian jumps, robust H_2-control, 11
with actuator amplitude and rate saturation constraints, fixed-order dynamic compensation, 1087
with additive controller gain variations, H_∞ control, 1500

LMI approach to stabilization of linear discrete-time periodic systems, 696
LQ controllers, non-fragile, robust, static state feedback case, 159
LQ/LQI controllers for multivariable systems, sequential tuning methods, application to hot strip mills, 1392
Lyapunov
design of global state and output feedback trackers for non-holonomic control systems, 744
equation, coinvariant subspaces and some problems related to spectral factorizations, 1129
technique, adaptive, for non-linear iterative learning, 840

Manufacturing system, multistage, stochastic optimal control, non-linear in the state dynamics, computational methods, 464
Markovian jump linear systems, discrete-time, robust H_2-control, 11
Matrix pencil characterizations of disturbance decoupling for systems with direct feedthrough matrices, 1042
Mills, hot strip type, application of sequential tuning methods of LQ/LQI controllers for multivariable systems, 1392
MIMO
2D discrete linear systems, state-space realization, elementary operation and variable inversion approach, 242
plants, three, simultaneous deadbeat-tracking control, 361
Minimax guaranteed cost control of uncertain non-linear systems. 1491
Model
matching, approximate, for non-linear control systems, 1671
multi-directional, validity tests, for non-linear system identification, 132
reference robust control for SISO systems with unmatched disturbances, 666
set based on frequency domain data, unfalsified probability estimation, 391
unfalsification analysis of self-tuning control, part 1, 1548
unfalsification analysis of self-tuning control, part 2, 1560
Model-free controller design for a single-link flexible smart materials robot, 531
Models
dynamic, for control of variable speed wind turbines, 1173
SISO Hammerstein type, identification, for control, using asymptotic method, 1692
uncertain dissipative type, quadratic guaranteed cost control, Riccati equation approach, 762
Motion control, compliant, for non-redundant rigid robotic manipulators, 225
Motor, synchronous, linear robust control, experimental comparison with non-linear control, 624
Motors, synchronous, adaptive output feedback control, 1475
Moving horizon estimation based fault detection, applied to cold tandem steel mill, 427
Multidimensional systems, strict system equivalence, 495
Multistep ahead prediction problem, H_∞ type, existence and convergence of solutions, 1078
Multivariable
constrained input linear systems, non-linear tracking control, 1160
iterative learning controllers, robust, synthesis, with application to a wafer stage motion system, 968
linear systems, repetitive and iterative learning controllers, internal-model-based design, 914
systems, linear, algebraic approach to decoupling, 582

Non-autonomous systems with delays, Popov absolute stability criterion extension, 1349
Non-holonomic
systems, learning optimal trajectories, 980
uncertain dynamic systems stabilazation, 349
Non-linear
control systems with uncertainties, feedback linearizable, exponential tracking, 1507
control systems, approximate model matching, 1671
discrete uncertain system class, stability and stabilization, general approach, 1298
feedback control of parabolic partial differential difference equation systems, 1572
iterative learning by an adaptive Lyapunov technique, 840
non-standard H_∞ control problems class, new solutions, 276
output feedback stabilization on a bounded region of attraction, 416
position–force control of objects grasped by multifingered mechanical hands, 639
processes, robust control design using empirical state affine models, 1525
QFT designs based on robust absolute stability criteria, stability, 74
SISO systems class, non-linearity measures, 29
state dynamics, computational methods and manufacturing application, 464
system identification, multi-directional model validity tests, 132
systems class, observer-based fault diagnosis, application to free radical copolymerization reaction, 787
systems, interconnected, class of, global $\mathcal{H}_\infty$ control and almost disturbance decoupling, 382
systems, local separation principle, 292
systems, singularly perturbed, imperfectly known, constrained feedback control, 49
systems, uniformly observable, observer design, 1375
tracking control for multivariable constrained input linear systems, 1160
uncertain systems, minimax guaranteed cost control, 1491
uncertain systems, optimal non-linear robust control, 329
Non-linearity measures for a class of SISO non-linear systems, 29
Non-linearly parametrized systems class, adaptive control using convexification, 1312

Observer
based fault diagnosis for class of non-linear systems, application to free radical copolymerization reaction, 787
based FDI techniques applied to detecting faults in dynamic bounded stochastic distributions, 1424
design for uniformly observable non-linear systems, 1375
Observers, exact, almost and optimal input decoupled (delayed), 552
Operating-point-unknown dynamic systems, control, 600
Optimal
non-linear robust control for non-linear uncertain systems, 329
sensor location for parameter estimation of distributed processes, 1235
trajectories learning for non-holonomic systems, 980
Optimal control
approach to robust control design, 177
of distributed hyperbolic systems with deviating arguments, 1026
of dynamic systems with hysteresis, 22

Optimization, d.c. type, approach to robust control, feasibility problems, 89
Output feedback sliding mode design, dynamic, for class of linear unmatched uncertain systems, 1463
Output-dissipativity, equivalence relations with learnability and strict positive realness, 824

Parabolic partial differential difference equation systems, non-linear feedback control, 1572
Parallel process diagnosis based on qualitative models, 1061
Parameter
  estimation of distributed processes, optimal sensor location, 1235
  varying linear discrete time-delay systems, stability and ℓ_2-gain controllers, 481
Partial differential difference equation systems, parabolic, non-linear feedback control, 1572
Partially observable stochastic system controllability, 144
Passivity-based stabilization and H_∞ control of Hamiltonian control systems with dissipation and its applications to power systems, 1686
PDE systems, non-linear, parabolic, finite-dimensional approximation and control, 439
Periodic
  reference, time-varying, of tracking systems, repetitive control, 1
  signal tracking in discrete-time non-linear systems, non-standard iterative learning control approach, 955
  systems, linear, discrete-time, LMI approach to stabilization, 696
Perturbed
  non-linear systems, imperfectly known, constrained feedback control under singular perturbation, 49
  systems with error variance and circular pole constraints, robust state estimation, discrete-time case, 303
Polynomial matrix
  factor extraction matrix, 686
  form systems, general solution, 733
Popov absolute stability criterion extension to non-autonomous systems with delays, 1349
Positive realness, strict, equivalence relations with learnability and output-dissipativity, 824
Power systems, passivity-based stabilization and H_∞ control of Hamiltonian control systems with dissipation and its applications, 1686
Practical implementation of a real-time iterative learning position controller, 992
Precompensator, normalizing, for the design of effective and reliable commutative controllers, 1280
Predictive
  control, linear continuous-time type, general flatness-based framework, 606
  generalized continuous-time analytical stable control design for minimum-phase systems, 1605
  non-linear model based control, successive constrained optimazation and interpolation, 312
Probability, unfalsified, estimation for a model set based on frequency domain data, 391
Process control
  free radical copolymerization reaction, application of observer-based fault diagnosis for class of non-linear systems, 787
  two chemical reactors in cascade, flatness-based control by quasi-static feedback, 115
Process diagnosis, parallel, based on qualitative models, 1061
Prediction problem, multistep ahead, H_∞ type, existence and convergence of solutions, 1078

QFT designs, non-linear, based on robust absolute stability criteria, stability, 74
Quadratic guaranteed cost control for uncertain dissipative models, Riccati equation approach, 762
Qualitative model basis for parallel process diagnosis, 1061
Quantitative analysis for controllability of symmetric control systems, 254
Quasi-periodic hybrid dynamic systems, uncertain, stability, 63
Quasi-static feedback control, flatness-based, illustrated on two chemical reactors in cascade, 115

Real-time iterative learning position controller, practical implementation, 992
Repetitive
  control of tracking systems with time-varying periodic references, 1
  learning type controllers, for linear multivariable systems, internal-model-based design, 914
Residual generators, consistency (parity) relation type, implementation procedures family, 720
Riccati equation approach to quadratic guaranteed cost control problem for uncertain dissipative models, 762
Risk-averse control of three-dimensional wear process, 1307
Robot
  single-link flexible smart materials type, model-free controller design, 531
  single-link flexible type, synthesized sliding mode control, 197
Robotic manipulators
  non-redundant rigid type, compliant motion control, 225
  robust learning control, extension to class of non-linear systems, 858
Robust
  H_2-control for discrete-time Markovian jump linear systems, 11
  H_∞ suboptimal and guaranteed cost state feedbacks as solutions to linear-quadratic dynamic games under uncertainty, 219
  learning control for robotic manipulators with an extension to a class of non-linear systems, 858
  non-fragile LQ controllers, static state feedback case, 159
  resilient dynamic controllers for systems with parametric uncertainty and controller gain variations, 1405
  stabilization via state feedback for descriptor systems with uncertainties in the derivative matrix, 407
  state estimation for perturbed systems with error variance and circular pole constraints, discrete-time case, 303
Robust control
  design of non-linear processes using empirical state affine models, 1525
  d.c. optimization approach, feasibility problems, 89
  linear, of synchronous motor, experimental comparison with non-linear control, 624
Robust stability
  of fourth-order linear time-invariant system with one uncertain parameter, acyclic system matrix, 1346
  of systems with mixed uncertainties under IQC descriptions, 776

Saint-Venant equations, conservativity condition, for infinite-dimensional conservative systems, 1224
Sampled-data
estimation problem, H_∞ type, convergence and existence of solutions, 1382
H_∞ state-feedback control of systems with state delays, 1115
iterative learning control using fuzzy network design, 902
non-linear H_∞ estimation and control, 704
Sampling rate, reduced, for plants with variations in initial states, iterative learning controller, 882
Self-tuning control
by model unfalsification, part 1, 1548
by model unfalsification, part 2, 1560
Sensor location, optimal, for parameter estimation of distributed processes, 1235
Sequential tuning methods of LQ/LQI controllers for multivariable systems, application to hot strip mills, 1392
Set-membership state estimation in the output-feedback predictive control of constrained linear systems, 655
Simultaneous bounded domain stabilization problem, geometric solutions, 1536
Singularly perturbed non-linear systems, imperfectly known, constrained feedback control, 49
SISO
non-linear systems class, non-linearity measures, 29
systems with unmatched disturbances, model reference robust control, 666
Sliding mode
based adaptive learning in dynamical-filter-weights neurons, 678
control with uncertainty adaptation for uncertain input-delay systems, 1255
control, synthesized, of a single-link flexible robot, 197
dynamic output feedback design for class of linear unmatched uncertain systems, 1463
Solidification temperature field, piecewise constant control method, 545
Solvability condition of an extended $\mathcal{H}_\infty$ control problem using Riccati inequalities, 265
Spectral factorization problems and coinvariant subspaces, Lyapunov equation, 1129
Stability
absolute, of positive systems with differential constraints, 210
absolute, Popov criterion extension to non-autonomous systems with delays, 1349
and stabilization for class of uncertain discrete non-linear systems, general approach, 1298
of a certain class of hybrid dynamical systems, 1362
of linear parameter-varying discrete time-delay systems, 481
of non-linear QFT designs based on robust absolute stability criteria, 74
of two-dimensional feedback systems, 343
of uncertain quasi-periodic hybrid dynamic systems, 63
robust, of fourth-order linear time-invariant system with one uncertain parameter, acyclic system matrix, 1346
Stabilizability
conditions of feedback loop, transfer function slope, 1249
constrained, exponential, of marginal and /or unstable linear systems, 652
Stabilization
decentralized, of large scale systems with multiple delays in the interconnections, 1213
local, of non-linear systems, by output feedback control, 292
non-linear output feedback type, on a bounded region of attraction, 416
of linear discrete-time periodic systems, LMI approach, 696
of second-order LTI switched systems, 1261
of systems with non-linear actuators, by output feedback, 187
of uncertain dynamic nonholonomic systems, 349
passivity-based, and H_∞ control of Hamiltonian control systems with dissipation and its applications to power systems, 1686
problem, simultaneous bounded domain type, geometric solution, 1536
robust, via state feedback, for descriptor systems with uncertainties in the derivative matrix, 407
State delay systems, sampled-data H_∞ state-feedback control, 1115
State space
control system design based on non-minimal state-variable feedback, further generalization and unification results, 1329
realizations of MIMO 2D discrete linear systems, elementary operation and variable inversion approach, 242
Steel mill, cold tandem type, application of moving horizon estimation based fault detection, 427
Stochastic
distributions, dynamic, bounded, fault detection using observer based FDI techniques, 1424
optimal control, non-linear state dynamics, computational methods and manufacturing applications, 464
systems, linear, controllability, 144
Switched systems consisting of unstable second-order linear time-invariant subsystems, stabilization, 1261
Symmetric control systems, controllability, quantitative analysis, 254
Synthesis
fixed-structure type, of induced-norm controllers, 1437
problems in timed discrete-event systems, new approach, 505
System equivalence, strict, for multidimensional systems, 495

Time-delay systems, linear parameter-varying discrete type, stability and ℓ_2-gain controllers, 481
Time-invariant linear discrete-time systems, graphs, closability and causality, 1051
Tom Fuller, a memoir, 457
Trackers, global state and output feedback types, Lyapunov design, for non-holonomic control systems, 744
Tracking
control, non-linear, for multivariable constrained input linear systems, 1160
exponential, of feedback linearizable non-linear control systems with uncertainties, 1507
systems with time-varying periodic references, repetitive control, 1
Transfer function slope, feedback loop stabilizability conditions, 1249

Uncertain
discrete non-linear system class, stability and stabilization, general approach, 1298
discrete systems with delays, guaranteed cost control, 105
dissipative models, quadratic guaranteed cost control, Riccati equation approach, 762
feedback system, mixed, SISO, under IQC description, robust stability, 776
input-delay systems, sliding mode control with uncertainty adaptation, 1255

linear unmatched systems class, dynamic output feedback sliding mode design, 1463
non-holonomic dynamic systems stabilization, 349
non-linear systems, minimax, guaranteed cost control, 1491
non-linear systems, optimal non-linear robust control, 329
quasi-periodic hybrid dynamic systems, stability, 63
Uncertainty, parametric, and controller gain variations, in systems controlled by robust, resilient, dynamic controllers, 1405
Unmatched uncertain linear systems class, dynamic output feedback sliding mode design, 1463
Unstable and/or marginal linear systems, constrained exponential stabilizability, 652
Validity tests for multi-directional models, non-linear system identification, 132

Wafer stage motion system, synthesis of robust multivariable iterative learning controllers, 968
Wear process, three-dimensional, risk-averse, control, 1307
Wiener–Hopf design of optimal decoupling one-degree-of-freedom controllers, 1657
Wind turbines
variable speed, design task for control, 1189
variable speed, dynamic models for control, 1173
Worst-case dual control, basic results, 1621
